

The key to a successful [Hyperion HFM](#) implementation is design. Our HFM Architects will work with your subject matter experts to analyze your current consolidation and close process and layout a design which will effectively and efficiently consolidate your data.

Our HFM consultants have extensive finance and accounting backgrounds. Most have worked as accountants at Fortune 500 companies and will understand your consolidation and financial reporting needs. It is relatively straight forward to implement HFM's basic functionality, but properly designing and configuring inter-company eliminations, foreign currency translation, and Cash Flow is another matter. Understanding these more complex business requirements and incorporating them into the HFM design is where ITI Consulting sets its self apart from the competition. We strive to understand the client's complex individual business requirements and to deliver the solution the client expects. Once the HFM "blueprint" is complete we will utilize our proven implementation methodologies to prototype, build, test and roll out your HFM application. Our vision from day one is GO LIVE!
