

Hyperion's [FDM](#) Application provides a single, systematic process for loading source data from source systems into a target application. Hyperion FDM Applications are designed to provide data visibility, integrity, and verification

A screenshot of the Hyperion FDM application interface. It displays a table with multiple columns and rows of data. The table is organized into sections, with a header row for each section. The data appears to be financial information, possibly related to a company's performance over time. The interface includes a sidebar on the left with navigation options and a top bar with application controls.

Entity	Account	Period	Value	Source	Target
Company A	Revenue	Q1 2024	1000000	Source System	Target System
Company A	Revenue	Q2 2024	1200000	Source System	Target System
Company A	Revenue	Q3 2024	1100000	Source System	Target System
Company A	Revenue	Q4 2024	1300000	Source System	Target System
Company B	Revenue	Q1 2024	800000	Source System	Target System
Company B	Revenue	Q2 2024	900000	Source System	Target System
Company B	Revenue	Q3 2024	850000	Source System	Target System
Company B	Revenue	Q4 2024	950000	Source System	Target System

for uploading financial reporting information to EPM applications. Extensibility, ease-of-use, stability, and performance are critical success factors to leverage business and IT investment in Hyperion FDM. ITI Consulting provides expert services to design and implement your Hyperion FDM Application. We emphasize using SQL import scripts to automate FDM as much as possible, since this is key to a seamless efficient close process with the least amount of manual intervention.
